

# Package: webp (via r-universe)

October 3, 2024

**Type** Package

**Title** A New Format for Lossless and Lossy Image Compression

**Version** 1.2.1

**Description** Lossless webp images are 26% smaller in size compared to PNG. Lossy webp images are 25-34% smaller in size compared to JPEG. This package reads and writes webp images into a 3 (rgb) or 4 (rgba) channel bitmap array using conventions from the 'jpeg' and 'png' packages.

**License** MIT + file LICENSE

**URL** <https://jeroen.r-universe.dev/webp>

**BugReports** <https://github.com/jeroen/webp/issues>

**SystemRequirements** libwebp

**Encoding** UTF-8

**Suggests** jpeg, png

**RoxygenNote** 7.1.1

**Language** en-GB

**Repository** <https://jeroen.r-universe.dev>

**RemoteUrl** <https://github.com/jeroen/webp>

**RemoteRef** HEAD

**RemoteSha** cc7cf6badf1008caa34029dd915d4d67f35950b6

---

`read_webp`*Webp image format*

---

**Description**

Read and write webp images into a bitmap array. The bitmap array uses the same conventions as the png and jpeg package.

**Usage**

```
read_webp(source, numeric = TRUE)
```

```
write_webp(image, target = NULL, quality = 80)
```

**Arguments**

|                      |  |
|----------------------|--|
| <code>source</code>  | raw vector or path to webp file  |
| <code>numeric</code> | convert the image to 0-1 real numbers to be compatible with images from the jpeg or png package. |
| <code>image</code>   | array of 3 dimensions (width * height * channel) with real numbers between 0 and 1.              |
| <code>target</code>  | path to a file or NULL to return the image as a raw vector                                       |
| <code>quality</code> | value between 0 and 100 for lossy compression, or NA for lossless compression.                   |

**Examples**

```
# Convert to webp
library(png)
img <- readPNG(system.file("img", "Rlogo.png", package="png"))
out <- file.path(tempdir(), "rlogo.webp")
write_webp(img, out)
# browseURL(out)

# Convert from webp
library(jpeg)
img <- read_webp(out)
jpeg <- file.path(tempdir(), "rlogo.jpeg")
writeJPEG(img, jpeg)
# browseURL(jpeg)
```
